Checkpoint 2: domain, HTTPS, analytics, launch hygiene, and the graduate badge

LIVE ADDRESS

arthurdavino.github.io

Chose the clean free subdomain rather than a paid personal domain. GitHub Pages serves this address over HTTPS by default, with no extra configuration needed, so the domain and HTTPS requirements are already met by this choice.

DONE

Analytics installed and working

Cloudflare Web Analytics added to the page. Confirmed with real traffic, not just a successful install message.

The screenshot shows the Cloudflare Web Analytics interface. At the top, it says 'Analytics' and 'Web Analytics'. Below this, it states 'Privacy-first analytics on the performance of web pages as experienced by your visitors.' There is a blue button labeled 'Add a site' and a link to 'Web analytics documentation'. A 'Sort by' dropdown menu is set to 'Created'. A table displays analytics for the site 'arthurdavino.github.io', which was created 17 minutes ago. The table shows 6 page views (Last 24 hrs) and 6 visits (Last 24 hrs). There is also a link to 'Manage site' and a note about 'JS Snippet installation'.

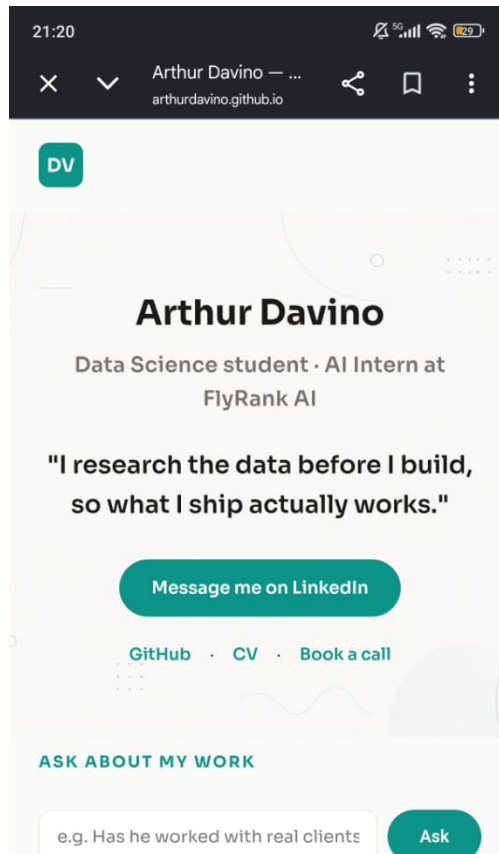

Site	Page views (Last 24 hrs)	Visits (Last 24 hrs)
arthurdavino.github.io	6	6

6 page views and 6 visits recorded on the live site.

DONE

Launch hygiene, checked on a real phone

Re-opened the live address on a phone after all of this week's changes. Favicon shows correctly, the browser tab title matches the updated title, and the page renders cleanly end to end, hero through the AI widget.

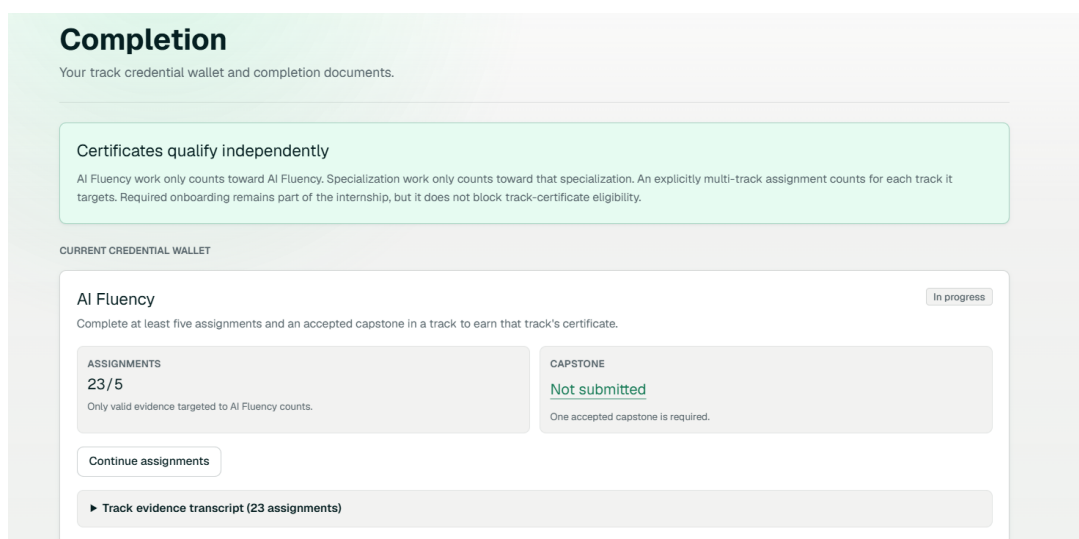

Real phone, real address, checked after every other change this week.

PENDING, NOT HIDDEN

Graduate badge cannot be installed yet

The badge and its verification page are only issued once a track is fully qualified in the internship portal, which requires an accepted capstone. The portal itself confirms this: assignments are well past the minimum (23 of 5 required), but the capstone is not yet submitted, and it is a hard requirement for the certificate and badge to unlock. That work belongs to Week 10, not this checkpoint. Rather than skip this silently or fake a placeholder, it is named here as a real, structural pending item with a clear reason and a clear next step: submit the capstone, then install the badge.

Portal screen: certificate gated on capstone submission, not on assignment count.
