

Open It On Your Phone

Week 7, Task 1: Mobile and accessibility fix log

LIVE URL

arthurdavino.github.io

Opened on a real Android phone first, not a resized desktop browser window. Reopened afterward on desktop to confirm nothing broke there either.

WHAT WAS TESTED

- Real device check: site opened on an actual phone, layout and text checked at that real width.
- Desktop check: reopened after the mobile fixes, everything still renders correctly.
- All links tested and working: GitHub, CV, Book a call, both LinkedIn CTAs, and the n8n repository link inside the case.
- Image weight: the n8n workflow screenshot is the original file, not compressed. On the real phone it loaded with no noticeable delay, so compression was tested against and found unnecessary rather than assumed unnecessary.

FIX 1: TEXT CONTRAST, SITE WIDE

Text contrast, site wide

BEFORE

```
--accent: #A8A29E;
```

AFTER

```
--accent: #78716C;
```

This variable controls the role line under my name, the project tags, and the final CTA line, so one change fixed the color everywhere it is used.

Contrast against background (#FAFAF9): **2.42:1** before -> **4.59:1** after. Minimum for readable text is 4.5:1.

FIX 2: LABEL CONTRAST INSIDE PROJECT CASES

Label contrast inside project cases

BEFORE

```
color: var(--text);  
opacity: 0.55;
```

AFTER

```
color: #57534E;
```

Labels like PROBLEM, WHAT I DID, and RESULT used opacity on the dark text color, fading it down into a light gray. Removed the opacity and set a solid color instead, so the contrast is predictable rather than dependent on what sits behind it.

Contrast against background: **3.87:1** before -> **7.3:1** after. Minimum for readable text is 4.5:1.

FIX 3: TAP TARGET SIZE FOR GITHUB, CV, AND BOOK A CALL LINKS

Tap target size for GitHub, CV, and Book a call links

BEFORE

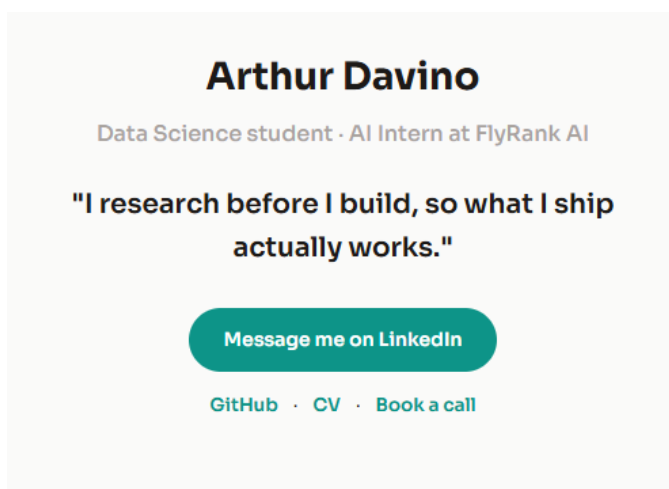

```
.links-row a {  
  color: var(--primary);  
  margin: 0 8px;  
}
```

AFTER

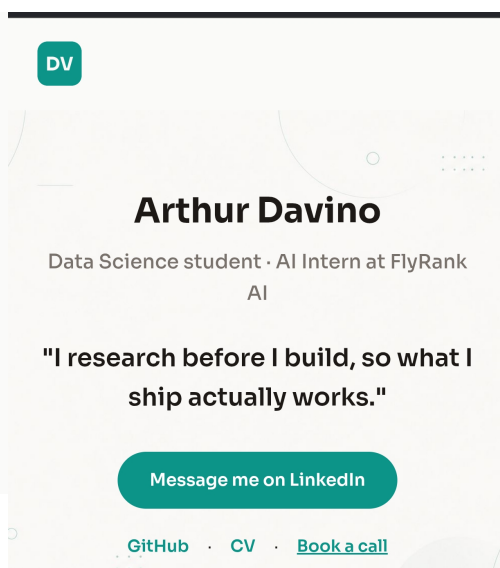

```
.links-row a {  
  color: var(--primary);  
  margin: 0 8px;  
  padding: 6px 4px;  
  display: inline-block;  
}
```

These three links had no padding, just small text with margin between them, so the real tappable area was smaller than the recommended minimum for touch. Adding padding and switching to inline-block gives each link a proper tap area on mobile.

BEFORE AND AFTER, REAL SCREENSHOTS

Before, hero section. Role line barely readable.

After, on a real phone. Role line and links now readable and tappable.

Message Triage Automation (n8n)

PROBLEM

I wanted to apply for an internship that required hands-on n8n and API experience, but I had never called an API by hand before.

WHAT I DID

I first practiced consuming the Anthropic API manually, then built an n8n workflow that receives a message through a webhook, classifies its urgency using the API, logs it to Google Sheets, and automatically sends an email alert for high-urgency messages.

RESULT

Tested end to end with real messages: correct urgency classification, sheet logging confirmed, high-urgency email sent, and a clean 200 response from the webhook.

Before, n8n case. All labels faded to light gray.

Message Triage Automation (n8n)

PROBLEM

I wanted to apply for an internship that required hands-on n8n and API experience, but I had never called an API by hand before.

WHAT I DID

I first practiced consuming the Anthropic API manually, then built an n8n workflow that receives a message through a webhook, classifies its urgency using the API, logs it to Google Sheets, and automatically sends an email alert for high-urgency messages.

RESULT

Tested end to end with real messages: correct urgency classification, sheet logging confirmed, high-urgency email sent, and a clean 200 response from the webhook.

After, on a real phone. Labels solid and easy to read.

FIX LOG SUMMARY

ISSUE	WHAT WAS BROKEN	WHAT CHANGED
Text contrast	--accent color at 2.42:1 contrast, below minimum	Changed to #78716C, 4.59:1
Label contrast	opacity 0.55 on dark text, roughly 3.87:1	Solid #57534E color, 7.3:1
Tap targets	No padding on GitHub, CV, Book a call links	Added padding and inline-block display
