

Map It & Give It a Face

Week 3, General AI Fluency track: one-line claim, content map, identity kit, and image curation

This deliverable pulls together work already completed and shipped earlier in the build (the identity kit, the through line, and the image curation pass), compiled here in the exact shape this assignment card asks for.

ONE-LINE CLAIM

"I research the data before I build, so what I ship actually works."

CONTENT MAP

SECTION	WHAT IS THERE	NAMED CTA
Hero	Name, role, the one-line claim	Message me on LinkedIn
Ask about my work	Live AI Q&A widget answering questions about the work below	(interactive, no separate CTA)
Projects	Strongest case first: CSI Filtros dashboard (real client), then the n8n message triage build	Like what you see? Let's talk
About	Photo and short bio	Open to internship opportunities
Final CTA	Closing section	Reach out on LinkedIn

Every section ladders up to the one action from Week 1: a LinkedIn message. The portfolio is a single page, so the "map" is the order of sections on that page rather than separate pages.

Still to gather: a testimonial or quote from the CSI Filtros contact is the one optional piece not yet collected. Everything else the map calls for (both case screenshots, the n8n repo link, the About photo) is already live on the site. PneuMax and the FlyRank internship work itself stay reserved outside this map for now, same as decided in the through-line pass.

IDENTITY KIT

Type

One font: Sora. Bold weight for headings, Regular for body text.

Palette

	Primary	#0D9488
	Text (near-black)	#1C1917
	Background (near-white)	#FAFAF9
	Accent / detail	#78716C

The accent shifted from #A8A29E to #78716C during the Week 7 mobile pass, after a real contrast check found the original too light to read comfortably. Same role in the palette, corrected value.

Logo / favicon

A "DV" monogram, Sora Bold, white on a teal rounded-square background. Used as the favicon and the small mark in the top corner of the site.

Style note

Sora throughout, one weight for headings and one for body. Teal (#0D9488) carries every link and action; near-black text on near-white background. Calm and confident, so the case studies stay the loudest thing on the page.

FINAL IMAGE SET

CSI Filtros dashboard, two captures	Real screenshot	The work itself, so it has to be the real thing.
n8n workflow diagram	Real screenshot	Same reasoning: a generated diagram would be lying about what was built.
Hero background texture	AI-generated	Connective tissue, not proof, so a generated abstract pattern is fine.
About photo	Real photo	Anything that is me stays a real photo, never generated.

Rejected, and why

First generation of the hero texture, from the same prompt and conversation as the one kept. Rejected for a less pleasing composition, not for being AI-generated.

Two earlier About photos: one with a stiff, document-ID look, one darker and without a shirt. Neither read as professional next to real client work.

A PneuMax contact/inquiry screen, dropped entirely from curation, not just swapped out, because it displayed fictitious contact details that would have implied a real, working business behind it.
